CROSS-SECTIONAL DATA

DIFFERENCES BETWEEN DATA COLLECTED (as described in the guidelines) AND ANONYMISED USER DATABASE

In order to ensure disclosure control and confidentiality of the UDB, some variables collected were removed or changed. On the other hand, in order to ease the use of the data, some variables were added.

This document summarizes the changes between the data collected by countries as described in the 2010 guidelines and the user database.

All income variables are in € (EURO). For the countries not members of the euro area the conversion factor can be found in variables HX010 and PX010 (please see for more details § 1.3.6 below).

1.3. VARIABLES ADDED

1.3.1. *RX010: Age at the time of interview*

A household member coded "80" has 80 or over

RX010 is calculated by subtracting date of birth (in year and month) from date of interview (in year and month). RX010 may vary from one digit compared to real age at the exact day of interview, as the day of birth is not known.

1.3.2. *RX020: Age at the end of income reference period*

A household member coded "80" has 80 or over

RX030 = DB030

1.3.4. *RX040: Work intensity*

Continuous variable from 0 to 1 (People older than 59 has WORK_INT = 99)

Based on persons aged 18-59 (students excluded)

Calculation of equivalised household size

Let

HM₁₄₊ number of household members aged 14 and over (at the end of income reference period)

HM₁₃₋ number of household members aged 13 or less(at the end of income reference period)
