

## Retail trade

February 2011

The retail trade index measures the monthly evolution of the turnover at current prices of enterprises with retail sale outlets. Since January 2009 the indices are calculated with reference to the base year 2005 using the new Ateco 2007 classification (Italian edition of Nace Rev. 2).

In February 2011 the seasonally adjusted retail trade index increased by 0.1% with respect to the previous month (+0.2% for food goods and 0.0% for non food goods). The percentage change of the average of the last three months compared to the previous three months decreased by 0.1%.

The unadjusted index was unvaried with respect to February 2010.
