

Industrial turnover and new orders

December 2012

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2009 the indices are calculated with reference to the base year 2005 using the new Ateco 2007 classification (Italian edition of Nace Rev. 2).

In December 2012 the seasonally adjusted turnover index increased by 0.8% with respect to the previous month (+0.5% in domestic market and +1.5% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -2.1 (-2.6 in domestic market and -0.8 in non-domestic one).

In December 2012 the seasonally adjusted industrial new orders index decreased by 1.8% with respect to November 2012 (-1.3% in domestic market and -2.5% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -3.7 (-4.4 in domestic market and -2.7 in non-domestic one).

With respect to the same month of the previous year the calendar adjusted industrial turnover index decreased by 6.3 (calendar working days being 19, one less than in December 2010).

In December 2012 the unadjusted industrial new orders index decreased by 15.3 per cent with respect to the same month of the previous year.

Industrial turnover and new orders indices (base 2005=100) - December 2012

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	Dec 12	Dec 12 Nov 12	Oct-Dec 12 Jul-Set 12	Dec 12	Dec 12 Dec 11	Jan-Dec 12 Jan-Dec 11	Dec 12	Dec 12 Dec 11	Jan-Dec 12 Jan-Dec 11
Turnover index	104.3	+0.8	-2.1	105.0	-6.3	-4.4	102.0	-9.2	-4.3
<i>Domestic market</i>	93.7	+0.5	-2.6	93.9	-9.2	-7.6	91.4	-11.8	-7.6
