

Labour indicators in enterprises

III quarter 2014

Hours worked

Hours worked in enterprises with at least 10 employees in industry and services are calculated both as volumes and as per capita indices with base year 2010 and with reference to the Ateco 2007 classification (the Italian edition of the Nace Rev. 2).

In the third quarter of 2014 seasonally adjusted volumes of hours worked for the total of industry and services increased by 0.4% with respect to the previous quarter. Working day adjusted volumes of hours worked for the total of industry and services increased by 0.7% with respect to the same quarter of 2013.

In the third quarter of 2014 seasonally adjusted per capita hours worked for the total of industry and services increased by 0.3% with respect to the previous quarter. Working day adjusted per capita hours worked for the total of industry and services increased by 1.0% with respect to the same quarter of 2013.

Job vacancies

A job vacancy is a paid post which can be newly created, unoccupied or about to become vacant, for which the employer is taking active steps and is prepared to take further steps to find a suitable candidate from outside the enterprise concerned. The job vacancy rate is the percentage ratio between vacancies and the sum of vacancies and occupied posts (both measured at the end of the reference quarter). The data refer to enterprises with at least 10 employees.

In the third quarter of 2014 the seasonally adjusted job vacancy rate for both the total of industry and services and the business economy was 0.5%, unchanged with respect to the previous quarter.
