

Industrial turnover and new orders

November 2014

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2013 the indices are calculated with reference to the base year 2010 using the new Ateco 2007 classification (Italian edition of Nace Rev. 2).

In November 2014 the seasonally adjusted turnover index decreased by 0.6% compared to the previous month (-1.2% in domestic market and +0.6% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -0.5% (-0.9% in domestic market and +0.4% in non-domestic one).

In November 2014 the seasonally adjusted industrial new orders index decreased by 1.1% compared with October 2014 (-3.9% in domestic market and +2.9% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -1.2% (-1.0% in domestic market and -1.5% in non-domestic one).

With respect to the same month of the previous year the calendar adjusted industrial turnover index decreased by -1.6% (calendar working days in November 2014 being the same as in November 2013).

In November 2014 the unadjusted industrial new orders index decreased by -4.1 per cent with respect to the same month of the previous year.

INDUSTRIAL TURNOVER AND NEW ORDERS INDICES (BASE 2010=100). November 2014

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	Nov 14	Nov 14 Oct 14	Sep-Nov 14 Jun-Aug 14	Nov 14	Nov 14 Nov 13	Jan-Nov 14 Jan-Nov 13	Nov 14	Nov 14 Nov 13	Jan-Nov 14 Jan-Nov 13
