

CIRCE provisionally works only for the Italian language that can be set up from the control panel.

CIRCE has been tested for Windows7 e Windows10.

After downloading and extracting the file CIRCE\_1.0.zip, run the file setup\_circe.exe.

The setup file will guide the user through the installation, asking firstly to accept the license. After that, it will let the user to select the destination location to install the package. The default folder is "C:\Circe" but it can be changed by pressing the "browse" button.

After this step, it asks where R is installed and shows the default folder "C:\Program Files\R\R-3.1.1", that can be modified.

At this point, the user is asked to choose the package name that will appear in the Start menu and if an icon for the desktop has to be created.

In the end, by choosing the Install button, CIRCE will be installed as previously specified.

Once the installation is completed, it is possible to test the package by using coding examples available in the Demo folder that contains also a brief description of its functioning (pdf document).

To better understand how the package works it is advisable to read in advance the user guide that can be downloaded from the website.

Both user guide and demo pdf documents can also be visualized from the menu bar of CIRCE GUI.

Please note: for the moment, both CIRCE user guide (Manuale Utente.pdf) and its GUI are in Italian. English versions will eventually be provided in the future.
