Data Sources and legal framework

The survey on international trade of goods with non-EU countries is carried out according to the following EU legislation, Regulation (EU) n.1724/2016 and Regulation n, 2119/2016, amending Regulation (EC) of the European Parliament and of the Council n. 471/2009; Regulation (EU) n. 1253/2016, amending Commission Regulation (EU) n. 92/2010; Regulation (EU) n. 2119/2016 amending Regulation no. 113/2010.

The extrastat monthly survey is carried out processing fiscal-administrative data (Single Administrative Document - SAD) according to statistical definitions and classifications.

Since 2000, in accordance with the EU legislation, exports and imports below the exclusion thresholds (commercial transactions values less than 1.000 Euros, starting since 2010) are monthly included as aggregate data.

Since September 2011, a new approach for the compilation of external trade statistics on natural gas in gaseous state and electricity has been implemented, Data on physical quantities are monthly collected from reliable sources, while for the other variables required by EU regulations (total trade in values and breakdown of volumes and values by partner countries) new estimation procedures have been developed.

Data population and classifications system

In compliance with the EU Regulations, the main classifications used in foreign trade statistics are based on the elementary information concerning the type of goods, the statistical partner country and the province of origin or destination of the goods.

Trade of goods with non-EU countries is classified by country of origin for imports and country of destination for exports.

Geographical and the geo-economic areas are defined according to the Nomenclature of countries and territories for the external trade statistics of the Community and statistics of trade between Member States, known as Geonomenclature.

The Combined Nomenclature (CN) is the primary nomenclature for traded goods used by the EU Member States, defined by the European Union and annually updated.

Since January 2009, products aggregations are defined according to the classification of the economic activities Ateco 2007, adapted to foreign trade (CPA), Ateco 2007 is the national version of the European nomenclature NACE rev,2 published in the Official Journal on 2 December 2006 (Regulation (EC) No, 1893/2006 of the European Parliament and of the Council of 20/12/2006), Ateco 2007 corresponds to Nace rev,2 up to the fourth digit, Data are released according to a timely intermediate breakdown of the sections.

In 2003, Istat adopted the classification for economic destination "Main Industrial Groupings (MIGS)", defined by Commission Regulation n. 586/2001 (Official Journal of the European Communities of 27/03/2001), amended by Regulation (EC) no. 656/2007 of 14/06/2007 following the entry into force of Nace Rev. 2.

The Main Industrial Groupings (MIGS) are:

1. Consumer durables;
2. Consumer non-durables;
3. Capital goods;
4. Intermediate goods;
5. Energy.

As for Ateco 2007, the MIGS classification has been adapted to the statistics on foreign trade.

Data processing

Both raw and seasonally adjusted trade values are published, TRAMO-SEATS procedure for Linux (February 2010 version) provides seasonally adjusted data.

Since 2012, some substantial process and product innovations have been introduced in the seasonal adjustment procedures, aimed to improving the accuracy of the estimates and providing users with a wider detail of the statistical indicators at main industrial groupings level for the short-term analysis of foreign trade.

Seasonally adjusted data are monthly revised, The models are annually reviewed in November, with the final revision of raw data, The TRAMO-SEATS procedure's specifications used by Istat are available to users under request.

Output

Data monthly released include monetary values, year-on-year and month-on-month variations of international trade in goods, Collected or estimated monetary statistical values (Cif, Fob) in current prices are reported.

Provisional data are released at approximately 25 days after the end of the reference month.

Confidentiality

Since 2000, Istat has defined new procedures for processing and dissemination of confidential data related to foreign trade in goods statistics, according to the current national regulatory framework (Law No. 675/96, Legislative Decrees N. 322/89, 281/99 and 196/03).

In particular, the new procedures bring to a significant reduction of the risk of identification, indirect and accidental, of confidential data and, at the same time, limiting the loss of information available for external users.

In addition to the protection of confidential information according to the principle of passive confidentiality, Istat provides a specific dissemination plan for international trade of goods at national and territorial level, designed in such a way to reduce the risk of indirect identification of confidential trade, Further information on the protection of privacy is available at the following link <https://www.coeweb.istat.it/>.
