

# Standardization of methods and processes: overview of the Istat activities and open problems

Gabriele Ascari, Marco Ballin, Stefano De Francisci, Carlo Vaccari<sup>1</sup>

## Abstract

*This paper wants to offer an overview of the activities carried out at Istat towards the standardization of statistical processes, with a focus on the tasks implemented within the Directorate for Methodology and the Working Group on standardization of methods and tools. Standardization of processes, methods and tools is an important step towards the efficiency of statistical production. The activities of the Working Group have been built on well-known international models, such as GSIM and, GSBPM. The opportunity just offered by the proposed process analyses and the potential future developments are described.*

**Keywords:** methodological services, standardization.
