

Labour market

Fourth quarter of 2020

an integrated picture

In the fourth quarter of 2020, labour market dynamics are still affected by measures to contain health emergency. The labour input, as measured by hours worked, declines by -1.5% compared to the previous quarter and by -7.5% compared to the fourth quarter of 2019; GDP contracts by -1.9% and -6.6%, respectively.

The number of employed grew by 54 thousand units (+0.2%) compared to the previous quarter, due to the increasing number of permanent employees - greater than the decline in fixed-term employees - and to the moderate growth in the number of self-employed. At the same time, the reduction in the number of unemployed (-122 thousand) is higher than the reduction in the number of inactive aged 15-64 (-10 thousand).

In a year-over-year perspective, employment is still declining (-414 thousand, -1.8% compared to the fourth quarter of 2019), even if permanent employees increase by 98 thousand units (+0.7%); instead, fixed-term employees mainly decrease (-383 thousand, -12.3%), but also the self-employed continue to decline (-129 thousand, -2.4%). The reduction involves both full-time and part-time employees, among whom the incidence of involuntary part-time reaches 65.2% (+1.3 points).

The number of unemployed decreases (-172 thousand, -6.7% compared to the fourth quarter of 2019), either those seeking their first job and those with previous working experiences, and the increase in the number of inactive people between 15 and 64 years old intensifies (+403 thousand, +3.1% in a year).

The employment rate, which is 58.2%, grows quarter-over-quarter (+0.3 points compared to the third quarter of 2020), but is still -0.8 points lower than in the fourth quarter of 2019. The unemployment rate decreases, both in conjunctural and year-on-year terms, while the inactivity rate - among people aged 15-64 - increases especially when compared with the fourth quarter of 2019.

On the enterprise side, the labour demand continued to grow up quarter-over-quarter even if to a lower extent in comparison with the previous quarter: both part-time and full-time jobs increased by 0.3%. By contrast, on an annual basis, total employee jobs continued to record a decline by 1.7%, a reduction that affected more heavily the part-time component (-3.4%) than full-time (-1%). The hours worked per employee showed a small drop on a quarterly basis (-2.9%) and a more evident one on an annual basis (-7.4%). The use of short-time working allowances grew up to 92,5 hours per 1,000 hours worked. The job vacancy rate dropped compared both to the previous quarter and the same quarter of the previous year (respectively by -0.1 and -0.3 percentage points). Labour cost decreased by 0.6% on a quarterly basis, as a result of a slight increase in wages and salaries equal to 0.5%, and a sustained decrease in social security contributions equal to 3.5%. On an annual basis, labour cost increased by 0.5%, following a growth in wages and salaries (+1.5%) and a decrease in social security contributions (-2.3%). The decline of social security contributions observed in this quarter, was a result of the adoption, in the second half of year 2020, of social contributions' relief, aimed at relaunching economic activity.

The 2020 average is the synthesis of the quarterly dynamics of the labour market, strongly and differently influenced by health emergency: the year-over-year growth of employment in the first quarter was followed by the consistent decline in the second quarter that continued, if at lower rates, also in the third and fourth quarters of 2020. On the average of one year, it is observed an exceptional fall in employment (-456 thousand, -2.0%), associated with the decrease in unemployment and the strong growth in the number of inactive. Furthermore, the reduction of jobs (-1.7%) and of total hours worked (-13.6%), as well the increase in the use of short-time working allowance hours (+139.4 each 1,000 hours worked), are more pronounced in services than in industry.

Direct statistical surveys and data collection from administrative sources for statistical purposes have been affected by the current health emergency. Corrective actions have been carried out in order to counteract its statistical effects and to ensure processing and dissemination of data for the fourth quarter of 2020. It should be noted, however, that the estimates presented in this press release are provisional – also in the consistency of some indicators from different sources – and may therefore be revised on the basis of further analysis and more extensive and complete information when available.

NEXT RELEASE: 11 June 2021

TABLE 1. LABOUR INDICATORS. Q4 2020, absolute values, percentage values and index numbers, percentage points changes

	Seasonally adjusted		Not seasonally adjusted data
	Value	Percentage changes (Q4 2020/Q3 2020)	y-o-y (Q4 2020/Q4 2019)

Labour cost (a) (c) (index 2015=100)	103.8	-0.6	0.5
Cash wages according to collective labour agreements (monthly average in euros) (f)	2,650	-	0.8

(a) Provisional data.

(b) For the hours worked (National Accounts) the change over the same period of the previous year is computed on seasonally adjusted data.

(c) Section from B to S (excluding O) of the Nace Rev 2 classification of economic activities.

(d) Number of jobs relating to hires by employment agencies.

(e) The change over the same period of the previous year is computed on calendar day adjusted data. (f) Not seasonally adjusted data calculated with a fixed employment structure (base December 2015).

Main results (third quarter of 2020)

In the fourth quarter of 2020, the labour input used in the economic system as a whole (expressed by hours worked of National Accounts) decreased compared to both the previous quarter (-1.5%) and the same quarter of 2019 (-7.5%).

The number of employed people, estimated by the Labour Force Survey net of seasonal effects, is 22 million 889 thousand people; for the second consecutive quarter, employment growth continues at a slower rate (+54 thousand, +0.2% compared to the third quarter of 2020), after the decline in the first two quarters of the year. The increase concerns permanent employees (+89 thousand, +0.6%) and the self-employed (+7 thousand, +0.1%), while the number of temporary employees is still decreasing (-41 thousand, -1.6%).

The employment rate reached 58.2%, up 0.3 points on the previous quarter, due to a drop in the North (-0.1 points) that was largely offset by growth in the Center (+0.7 points) and in the South (+0.5 points). The unemployment rate, after growth in the third quarter, declined again to 9.2% (-0.5 points on the third quarter of 2020) and the inactivity rate rose to 35.8% (+0.1 points).

In industry and services enterprises, employee jobs increased by 0.3% on a quarterly basis, while decreased by 1.7% year-on-year. Both the employee jobs components (full-time and part-time) increased by 0.3% on quarterly basis and decreased, on annual basis, respectively by 1% and by 3.4%.

The number of hours worked decreased both to the previous quarter and to the same quarter of the previous year (-2.2% and -8.7). Similarly, per capita hours worked fell by 2.9% on a quarterly basis and by -7.4% year-on-year. Short-time working allowance hours increased from 7.5 to 92.5 per 1,000 hours worked. Temporary employment agency jobs increased by 7.8% on a quarterly basis, while decreased by 1.7% on an annual basis.

The seasonally adjusted index of labour costs per full time equivalent (Fte) decreased by 0.6% on a quarter-over-quarter basis, as a result of an increase both in wages and salaries (+0.5%) and of a sustained decrease in social security contributions (-3.5%). On a year-over-year basis, labour costs showed an increase by 0.5%, with a growth by 1.5% of wages and salaries and a reduction of social security contributions equal to -2.3%.

The job vacancy rate was 1.0%, and showed a decrease to the previous quarter (-0.1 percentage points), and to the same quarter of the previous year (-0.3 percentage points).

In this quarter the "Focus on" titled "*The impact of the sanitary emergency on the use of the short-time working allowance hours*" deepens the dynamics of these hours and their use in the different economic activity sections.

In this release we also disseminate data on labour supply and demand referred to the annual average 2020; for labour supply in the annex are also published data at the provincial level, metropolitan city and large municipality.

The Italian Methodological note shows the confidence intervals of sample estimates of the main not-seasonally adjusted indicators of labour supply and demand.

focus on

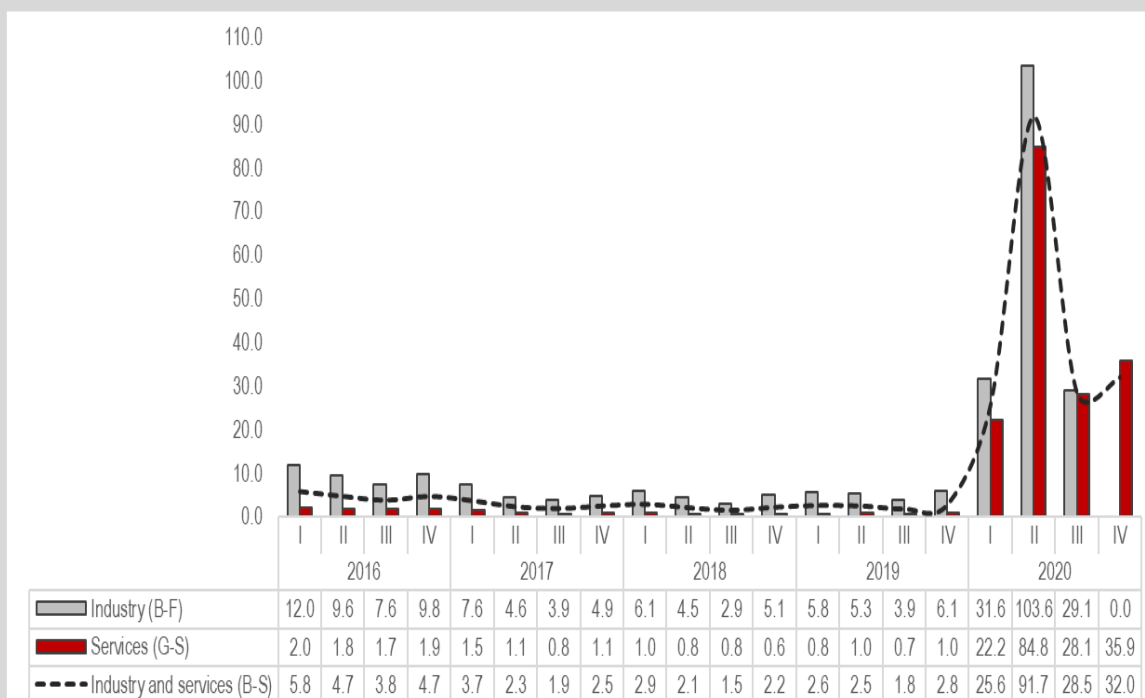

The sanitary emergency impact on the Short-Time Working Allowance use

As a consequence of the COVID-19 health emergency, the year 2020 was characterized by an exceptional recourse to the Short-Time Working Allowance (Cig in Italian). It was due to the suspension or reduction of the enterprise working activity and supported by special government interventions.

The quarterly survey on job vacancies and hours worked (Vela) and the monthly Large Business Survey (GI) quarterly collect the effectively used Cig hours, which include ordinary, extraordinary or derogating Cig hours and the solidarity contract hours. In 2020, they also include the solidarity fund hours.

This focus shows the *per capita* quarterly Cig hours that are defined as the total amount of Cig hours, effectively used over a quarter, divided by the average number of employees. Since 2016, the coverage of the Vela survey has also been extended to enterprises with at least one employee and not only to those with 10 or more employees.

FIGURE 1. PER CAPITA CIG HOURS, INDUSTRY AND SERVICES. I 2016-IV 2020

Source: Istat, Vela and GI

Figure 1 highlights the exceptional increase in *per capita* Cig hours in 2020. The quarterly dynamics follow the effect and the length of the special government interventions carried out to face the COVID-19 health emergency (see Table 1).

In the first quarter of 2020, the effects of the pandemic and the consequential lock-down mainly concerned the month of March and, therefore, had a more limited impact than that observed for the second quarter, when the total lock-down lasted for about two months. As a result, *per capita* Cig hours – in industry and services (NACE Rev. 2 economic activity sections from B to S) – rose from 25.6 in the first quarter to 91.7 in the second.

In the third quarter of 2020, the improvement in the sanitary conditions and the consequential recovery of many economic activities led to a decrease in the use of the Cig, which fell to 28.5 *per capita* hours. In the fourth quarter of 2020, due to the second wave pandemic and the local lock-downs, the Cig *per capita* hours slightly increased (32 hours), mainly in the service sector.

In particular, the sectorial analysis shows that even if in the first two quarters of 2020 the Cig per capita hours were higher in industry than in the services' sector (31.6 to 22.2 in the first quarter, and 103.6 to 84.8 in the second quarter); in the third quarter the two values are quite similar (29.1 and 28.1), while in the fourth quarter services exceed industry Cig hours (35.9 to 25).

FIGURE 2. PER CAPITA CIG HOURS, BY ECONOMIC ACTIVITY SECTION. 2015-2020, annual averages

Source: Istat, Vela and GI

Figure 2 shows the increase in *per capita* Cig hours in 2020 by economic activity sections, making a comparison between the annual averages in 2020 and in the years before the COVID-19 emergency (2015-2019). In the past years, the economic activity sections that made the Cig's greater use were: Construction (section F), Mining and quarrying activities (section B) and Manufacturing (section C) – showing average *per capita* Cig hours, in 2015-2019, equal to 10.1, 8.3 and 7.3, respectively –. In 2020, *per capita* Cig hours were about six times higher than in the past years in sections F (56.8 hours) and C (47.9 hours), and about four times higher in section B (33.6 hours).

Furthermore, in 2020, sections with the highest number of *per capita* Cig hours were: Accommodation and food services (I), which from an average of 0.5 *per capita* Cig hours, in the 2015-2019, rose to 87.3 in 2020; Arts, entertainment and recreation activities (R), from 0.5 to 82.6; Education (P) from 0.6 to 69.6. On the other hand, the sector with the lowest use of the Cig was Electricity, gas and steam (D), which stood at an average of 4.3 hours per employee (0.6 in 2015-2019).

PROSPECT 1. SYNOPTIC PANEL OF THE SPECIAL GOVERNMENT INTERVENTIONS. Year 2020

	TIME	PERIOD	SOCIAL SAFETY NET
"Decreto Cura Italia" (DL 17.03.2020, n.18)	From 23 February to 31 August 2020	9 weeks	CIGO,CIGD, Solidarity contract hours (*)
"Decreto Rilancio" (DL 19.05.2020, n.34)	From 23 February to 31 August From 1st September to 31st October 2020	+ 9 weeks 5 + 4	CIGO, CIGD (**), Solidarity contract hours
"Decreto Agosto" (DL 14.08. 2020, n. 104)	From 13 July to 31 December 2020	18 weeks 9 + 9 (***)	CIGO,CIGD, Solidarity contract hours
"Decreto Ristori" (DL 28.10. 2020 n.137)	From November 16, 2020 to January 31, 2021	6 weeks (***)	CIGO,CIGD, Solidarity contract hours
Budget Law 2021 (L. 30.12. 2020, n.78)	From January 1st to March 31st 2021 From January 1st to June 30th 2021	12 weeks	CIGO, CIGD Solidarity contract hours

(*) Short-Time Working Allowance (Cig in Italian): ordinary (CIGO), extraordinary or derogating (CIGD).The Solidarity contract hours is also recognized to employees of workers who receive other Solidarity Funds (i.e. those for handicrafts and temporary workers and for the autonomous provinces of Trento and Bolzano), which employ from more than 5 to 15 employees.

(**) CIGD is granted to private sector employers who are not protected by the current provisions (referred to in Titles I and II of Legislative Decree 148/2015) regarding the working hours suspension or reduction.

(***) The employer is obliged to pay an additional contribution for the second nine weeks.

Glossary

Active persons: persons aged 15 years and over who during the reference week (the week the information refers to) had at least one of the following characteristics:

- worked for pay or profit in a job or business for at least one hour;
- worked unpaid in the family enterprise where they usually work;
- did not work as they were temporarily away from their jobs (for holidays or sickness). Out of service-employees are considered employed if the absence from work is no longer than three months, or if they keep on perceiving half of the wage at least. The self-employed persons out of service, except for family workers, are considered employed if they continue their activity during their absence. Family workers are considered employed if the absence from work is no longer than three months.

The previous conditions are independent of the signing of an employment contract and therefore the employed estimated through the sample Labour Force survey include also forms of irregular work.

Business surveys: OROS (Employment, wages and salaries and social charges), **GI** (Large Enterprises) **and Vela** (Job vacancies and hours worked): the Oros survey produces quarterly information on employment trends (Full-Time Equivalent - FTE), wages, salaries and social charges for employees of all size enterprises and private institutions. Oros indicators are estimated by integrating administrative data from INPS (the Italian National Institute for Social Security) and data from the monthly survey on Large Enterprises (GI). The Vela survey is a quarterly data collection on job vacancies and hours worked that measures - together with the monthly survey on employment, working hours, wages and salaries and labour cost in large enterprises - job vacancies, hours worked and hours paid in enterprises of the private sector with at least 10 employees, excluding agriculture.

Contractual wages and salaries in cash value: includes all compensation items used to calculate the monthly index of contractual wages and salaries plus any arrears and one-time bonuses. The amounts related to each compensation item (wage or salary) are allocated to the months of actual payment. Wages and salaries in cash value are calculated for all grades envisaged when defining the base (which is the same as that of the index of contractual wages and salaries). The aggregates are then determined according to a constant structure of employment, which allows for monitoring the pay trend, net of the effects due to changes in the structure of employment by professional status and grade.

Data adjusted for calendar reasons: working day adjusted data, Easter holidays and leap year.

Employment rate: Ratio between employed people of a given age group (usually aged 15-64) and the overall resident population of that given age group.

Full-time equivalent (FTE): a unit to measure the volume of work performed in all jobs. It is obtained by lowering to full-time equivalent (the unit value of) jobs with a reduced working time, included temporary agency jobs and jobs on call. In the OROS survey FTEs include middle managers, employees, workers, salespersons, apprentices and home workers. Managers are excluded. Unlike the number of employed people, the calculation of FTEs excludes workers benefiting from the short time working allowance or job-security agreements.

Within the framework of national accounts, FTEs measure the number of full-time equivalent jobs and provide a measure of labour input used for the production of income in the economic territory of the country. This measure is calculated because hours worked may differ from a full-time standard depending on the kind of job: main activity or secondary jobs, working time (full-time, part-time), declared or undeclared to fiscal or social contributions authorities. Full time equivalent units are obtained as the ratio between the total amount of hours actually worked and the average number of hours worked by a full-time job.

Hours of job-security agreement: hours not worked due to job-security agreements.

Hours of short-time working allowance: total amount of ordinary, extraordinary, exceptional hours of short time working allowance, and hours of job-security agreement used by enterprises in the reference quarter.

Hours worked: total number of ordinary hours and overtime, worked by employees with an employment contract, excluding managers. Within the framework of national accounts, the hours actually worked – both paid and unpaid in any occupation (employed and self-employed) - provided they produce income. The calculation of hours worked includes the hours worked during ordinary working hours, the hours worked in addition to the ordinary working hours (overtime), the time needed for activities such as preparation of the workplace and the time corresponding to short breaks at work. The calculation excludes: hours paid but not actually worked (annual leaves, holidays and sick leaves, etc.), meal breaks and the way to and from work.

Hours worked per employee: average number of ordinary and extraordinary working hours of employees under contract.

Inactive persons: All persons not classified as employed or job seekers (unemployed).

Inactivity rate: Ratio between people that are not part of the labour force in a given age group (usually aged 15-64) and the **overall** resident population of that given age group.

Involuntary part-time work: individuals working part-time who accepted to work part-time because a full –time job could not be found.

Job-security agreement: job agreement between employer and trade unions aimed at reducing the working time, with the purpose to maintain the current employment levels in case of enterprise crisis or to hire new employees through a planned working time or wages reduction program (L.863/84).

Job vacancies are the posts, either newly created or already existing, unoccupied or about to become vacant, which the employer actively seeks to fill with - and is prepared to make further efforts to find - a suitable candidate from outside the enterprise. The data presented here refers to job vacancies for employees, available as of the last day of the reference quarter. Therefore, they measure the staff search which at that date has already started and not yet been completed (because a suitable candidate has not been already hired and the company has not decided to stop the search).

Job vacancy rate: ratio between the number of vacant posts and the sum of vacant and occupied posts. Therefore, the job vacancy rate measures the part of occupied and vacant jobs for which staff search is ongoing. The data used to calculate the job vacancy rate refers to the last day of the reference quarter.

Labour cost: total expenditure borne by employers for employing staff (including wages, salaries in cash and in kind, employers' social security contributions, vocational training costs).

Labour force: People in employment and unemployment.

Largest municipalities: municipalities that at 2001 Census had at least 250 thousand inhabitants (Roma, Milano, Napoli, Torino, Palermo, Genova, Bologna, Firenze, Bari, Catania, Venezia, Verona, Messina).

NACE Rev.2: classification of economic activities published in the Official Journal on 20 December 2006 (Regulation EC of the Council and the European Parliament No 1893/2006) and adopted by Istat on 1 January 2008.

Ordinary hours: all the hours worked, included at night and during holidays and excluding overtime, hours of Short time working allowance and hours not worked due to holidays, days-off and in general, hours not worked even if a compensation for them was received.

Overtime: time worked in addition to hours worked during normal periods of work, net of compensation of stored overtime credit systems, Working hours on Sundays, nights or public holidays are considered as overtime only if they are not included in the working time under contract or stored overtime credit systems.

Payroll job: employment contract between a single natural person and a production unit (enterprise), the object of which is the performance of work in return for compensation (pay). Payroll jobs, therefore, are the number of jobs occupied by employees (both full- or part-time) regardless

of the amount of hours worked on a given reference day. Just like the number of employees, payroll jobs are a stock variable at a certain moment in time. Workers, under regular contract by a production unit, are included even if they are not working due to holidays, parental leaves, short time working allowances, etc.

Permanent employees: workers under permanent contract where there is no end-date.

Reference week: in the Labour Force Survey, the week the information collected refers to (usually it is the week preceding the interview).

Seasonally adjusted data: data that have been adjusted for seasonal variations, including trading-day (working-day) effects and other regular calendar variations if present (including changes in weather, harvests, major holidays, and school schedules). These seasonal adjustments make it easier to observe the cyclical, underlying trend of a short term indicator.

Self-employed persons (workers): People working in an economic unit without subordination. The following are considered self-employed workers: holders, partners and managing directors of enterprises; or institutions respecting the following conditions: actually work in enterprises or institution, are not in the payroll, are not paid with invoice, do not have contracts as casual workers; members of producers' cooperatives who work in the enterprises but are not in the payroll; contributing family workers of the holder who work neither with pay nor with social contributions.

Short-time working allowance: State instrument that provides support when businesses are forced to downsize or suspend their activities as a result of legally-acknowledged crises or difficulties. The instrument consists in the provision by INPS (the Italian Social Security Institute) of compensation to substitute for the salaries of employees who have been laid off or whose working hours have been reduced.

There are three different forms of Short time working allowances:

- *ordinary*, which applies to enterprises in the industrial sector during lay-offs and contractions in productive activity due to temporary market situations or to temporary circumstances that do not depend on the employer, the employees;
- *exceptional*, which is a form of economic support for workers, employees and middle managers who have been laid off from work and have no access (or no longer have) to the ordinary or extraordinary short time working allowance. It also provides economic support for apprentices, temporary workers and homeworkers for enterprises using ordinary and extraordinary short-time working allowances;
- *extraordinary*, which applies to enterprises facing difficulties due to restructuring, reorganization, conversion, company crisis or for recruiting procedures.

Social security contributions: the amount of the social charges incurred by the employer to the social security funds as well as the amount set aside for severance pay.

Survey on contractual wages and salaries: statistics derived from the survey on contractual wages and salaries are based on the concept of "price of work." Thus they refer to a constant number of workers, characterized by a fixed structure of professional status (workers, employees, managers) and grade (base). The base currently in force is December 2015 = 100. They satisfy the need to assess the dynamic of earnings, net of the effects due to changes in the structure of employment by professional status, grade, working hours (full-time/part-time), seniority, overtime, decentralized bargaining, absences, conflicts etc.

Temporary (employment) agency jobs: workers under temporary contract, hired by a temporary employment agency that supply temporary work (supplier). The agency puts these persons at disposal of another legal-economic unit (enterprises or institution requiring) in order to cover a temporary productive need. In NACE Rev.2 this kind of contract falls in the category "Temporary employment agency activities" (group 78.2) included in section N "Administrative and support service activities".

Temporary workers: workers under a fixed-term contract where there is an end-date.

Unemployed (job seekers): unemployed people aged between 15 and 75 who: have looked for a job at least once in the 30 days before the survey and are willing to start work (or to start their own business) in the next two weeks; Will start work within three months since the interview and are willing to work within the two weeks following the interview (or to start their own business), in case it is possible to start work.

Unemployment rate: ratio between unemployed people of a given age group (usually aged 15 and over) and the total number of the employed and unemployed (the labour force) of the same age group.

Voluntary part-time work: individuals working part-time who say they work part-time for reasons other than the lack of full-time employment opportunities.

Wages and salaries: They are defined as the total “de facto” remuneration in cash, payable to all persons counted on the payroll in return for work done during the accounting period. Wages in kind are excluded. They include the values of any social contributions, income taxes, payable by the employee even if they are actually withheld by the employer and paid directly to social insurance schemes and tax authorities on behalf of the employee. “De facto” wages differ from national contractual (agreed) wages because the last ones include only the components related to national labour agreements.

	Labour Force Survey	Business indicators (Oros and Large Enterprises Surveys)	National accounts	Indicators on hours worked and job vacancies (Vela and Large Enterprises Surveys)	Contractual wages and salaries (indices and levels)
Type of source	CAPI-CATI sample surveys covering the resident population in households and estimating the number of persons employed, the unemployed and the inactive. Two-stage annual sample including more than 250 thousand private households resident in Italy (that is around 600 thousand people) in around 1,400 municipalities.	Census survey carried out by integrating: <ul style="list-style-type: none"> • data from the monthly survey on large enterprises with at least 500 employees (GI); • administrative data for small and medium-size, and large enterprises not covered by the monthly survey GI (by the National Social Security Institute). 	Statistical processing, allowing to estimate labour input, through integration and comparison of different statistical sources and indirect methods of estimation.	Census survey for enterprises with at least 500 employees (GI). Sample survey for enterprises with less than 500 employees (Vela), sample of around 26,000 enterprises (rotated by one third every year).	Survey based on a sample of 73 national collective labour agreements on the economic treatment of 2,855 occupations ruled by specific contracts, and with specific qualifications and levels.
Data collection units/bodies obliged to provide data	Private households resident in Italy. People permanently living in community settings (religious institutions, barracks, etc.) are excluded.	Active enterprises and private institutions with employees residing in Italy.	Production units residing in the economic territory of the country. Resident and not resident people working in resident units are included and resident people working in production units not residing in the economic territory of the country are excluded.	Active enterprises and private institutions with employees residing in Italy. Data collection units: the enterprise in Vela, the functional unit in GI.	Professional associations.
Coverage in terms of employment	Employees and self-employed (with or without contracts) in sectors from A to U of the Nace rev. 2 economic activity classification.	Regular employees in industry and services, sectors from B to S, excluding O, of the Nace rev. 2 economic activity classification.	Employees and self-employed (with or without contracts) in sectors from A to U of the Nace rev. 2 economic activity classification.	Regular employees in industry and services, sectors from B to S, excluding O, of the Nace rev. 2 economic activity classification.	Employees (excluding apprentices and managers) whose compensations are ruled by the national collective labour agreements in sectors from A to S, of the Nace rev. 2 economic activity classification.
Unit of analysis	Persons aged 15 and over residing in private households.	Functional units of economic units (enterprises and private institutions) with employees. For large enterprises functional units are mainly used, for the administrative data functional units are approximated by enterprises and private institutions.	Total labour input: domestic employed, jobs, hours actually worked and full time equivalent Fte.	Economic units (enterprises and private institutions) with employees.	National collective labour agreements.

	Labour Force Survey	Business indicators (Oros and Large Enterprises Surveys)	National accounts	Indicators on hours worked and job vacancies (Vela and Large Enterprises Surveys)	Contractual wages and salaries (index numbers and levels)
Main indicators definition	<p>Employed persons: people aged 15 and over who have at least one of the following characteristics in the reference week:</p> <ul style="list-style-type: none"> • have worked in any activity at least for one hour (with or without contract) to be paid either monetary or in kind; • employees: not at work (for example, for holidays, sickness, compulsory parental leave) for less than three months and paid or, if not at work for more than three months, still paid at least 50%. • self-employed: not at work but continuing the activity during the absence. <p>Unemployed persons: not employed persons aged between 15 and 74 years who:</p> <ul style="list-style-type: none"> • have looked for a job at least once in the 30 days before the survey and are willing to start work (or to start their own business) in the next two weeks; <p>or</p> <ul style="list-style-type: none"> • will start working within three months from the interview and are willing to work (or to start their own business) within the two weeks following the interview, if possible. <p>Inactive persons (not labour force): persons who do not belong to labour forces, that is persons who are not classified as employed or looking for a job (unemployed).</p>	<p>Payroll jobs: the number of jobs occupied by employees with an employment contract (full-time or part-time), regardless of the amount of hours worked.</p> <p>Workers, under regular contract by a production unit, are included even if they are not at work due to holidays, parental leaves, short time working allowances, etc.</p> <p>“De facto” wages and salaries: wages, salaries and other benefits in cash, gross of income taxes and social contributions, periodically paid to employees as indicated by national contracts, enterprise level and individual agreements and legal provisions in force.</p> <p>Social security contributions: the amount of the social charges incurred by the employer towards the social security funds as well as the amount set aside for severance pay.</p> <p>Labour cost: the whole of gross of wages and salaries and social security contributions.</p> <p>Fte: full-time equivalent employee jobs, net of short time working allowance.</p>	<p>The labour input that contributes to the gross domestic product (GDP) generated by the economic system in the reference period is measured by three employment definitions:</p> <ul style="list-style-type: none"> • hours actually worked in all jobs • domestic employed persons (resident and not resident people employed in resident production units) • jobs (occupied by domestic employed persons) • full-time equivalent (Fte) (the number of full-time jobs corresponding to the total amount of hours actually worked). <p>Employed persons and jobs include workers temporarily not at work due to short time working allowance.</p> <p>Fte are calculated excluding workers benefiting from the short time working allowance. Hours actually worked include overtime hours and exclude short time working allowance hours, holidays, sickness, work permits.</p>	<p>Hours actually worked by regular employees, including normal time and overtime in the reference quarter .</p> <p>Short time working allowance hours including ordinary, exceptional and extraordinary short time working allowance and hours related to job-security agreements actually used in the reference quarter.</p> <p>Job vacancy rate: percentage ratio between the number of vacancies and the sum of vacancies and occupied employee jobs. Job vacancy rate measures both occupied and vacant jobs for which staff search is ongoing.</p>	<p>Contractual wages and salaries: They are based on a definition of monthly contractual wages and salaries calculated as one twelfth of annual wages and salaries on the basis of the national collective labour agreements. The accounted components are: base salary, cost of living allowance, periodic seniority increases, shift work allowance and other general allowances (when relevant in the sector), additional months of salary and other payments regularly paid in the year term.</p> <p>Contractual length of work: hours of work to be worked, according to the collective labour agreements, by full-time employees, net of those paid but not worked, for holidays, work permits (annual work reduction, abolished public holidays, study, union assembly).</p> <p>Indicators of contractual tension: employees under expired agreements and the ltime passed from the expiration date.</p> <p>Contractual wages and salaries on a cash and an accrual basis: wages and salaries levels including not only the components considered in the calculation of the indices but also one off and arrears. In wages and salaries on an accrual basis the components are attributed to the periods they refer to, according to the collective agreements (for example, the arrears for the period from the collective agreement expiration date). In wages and salaries on a cash basis the components are attributed to the periods when they have actually been paid.</p>

	Labour Force Survey	Business indicators (Oros and Large Enterprises Surveys)	National accounts	Indicators on hours worked and job vacancies (Vela and Large Enterprises Surveys)	Contractual wages and salaries (indices and levels)
Main indicators measure	<p><u>Indicators:</u> Stock of employed persons (employees and self-employed), unemployed, inactive and their rates.</p> <p><u>Reference time:</u> Reference week for the collected data (in general, the one preceding the interview). During the year, data are collected through a uniform distribution of the household sample over all the year weeks.</p> <p><u>Estimate:</u> produced with a calibration estimator interpretable as average of weekly stocks.</p>	<p><u>Indicators:</u> Stock of employee jobs. Ratio between stocks of de facto wages and salaries and Fte. Ratio between stocks of social security contributions and Fte. Ratio between stocks of labour cost and Fte.</p> <p>Only indices with base 2015=100 are released.</p> <p><u>Reference time:</u> Jobs and labour costs are measured on a monthly basis.</p> <p>In the administrative data all employee jobs with a employment contract and their reported labour cost components are counted even if they refer to just one day in the month.</p> <p>In the survey data, monthly stocks are obtained as average of those at the beginning and end of the month.</p> <p><u>Estimate:</u> Quarterly average of monthly stocks.</p>	<p><u>Indicators:</u> Stocks of hours worked, domestic employed workers, jobs, full-time equivalent (Fte).</p> <p><u>Reference time:</u> Average employment over the period (quarter and year).</p>	<p><u>Indicators:</u> Hours worked by employees in the quarter. Hours worked per capita in the quarter. Overtime as percentage of hours worked. Short-time working allowance hours per 1,000 hours worked. Job vacancy rate.</p> <p>For hours worked and per capita hours worked only indices with base 2015=100 are released.</p> <p><u>Reference time:</u> Hours worked include all hours worked by employees in the quarter. Short-time working allowance hours include those actually used in the reference quarter. The number of job vacancies refers to the last day of the quarter.</p> <p><u>Estimate:</u> Per capita hours worked are calculated dividing hours worked by the average of jobs in the last day of the previous and reference quarter.</p> <p>The job vacancy rate is calculated as the percentage ratio between the number of job vacancies in the last day of the reference quarter and the sum of vacant and occupied jobs in the same day.</p>	<p><u>Indicators:</u> Hourly and per capita contractual wages and salaries by qualification, national collective agreement or Nace. Released as monthly indices and annual average (base December 2015=100). Contractual wages and salaries on a cash basis, monthly average by Nace. Quarterly levels. Contractual wages and salaries on a cash and an accrual basis by national collective agreement. Annual levels. Share of employees whose national collective agreements expired, and the time passed (months) from the expiration date. This term is published both for the employees waiting for a renewal (specific indicator) and for all the employees in the economic activity of reference (generic indicator).</p> <p><u>Time reference:</u> The implementation of the national collective agreements is observed on a monthly basis.</p>
