

Industrial turnover and new orders

September 2011

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2009 the indices are calculated with reference to the base year 2005 using the new Ateco 2007 classification (Italian edition of Nace Rev. 2).

In September 2011 the seasonally adjusted turnover index decreased by 5.4% with respect to the previous month (-5.4% in domestic market and -5.3% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +0.9 (0.0 in domestic market and +2.9 in non-domestic one).

In September 2011 the seasonally adjusted industrial new orders index decreased by 8.3% with respect to August 2011 (-10.1% in domestic market and -5.5% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +0.8 (+1.7 in domestic market and -0.6 in non-domestic one).

With respect to the same month of the previous year the calendar adjusted industrial turnover index rose by 1.9 (calendar working days being 22, as in September 2010).

In September 2011 the unadjusted industrial new orders index decreased by 3.6 per cent with respect to the same month of the previous year.

Industrial turnover and new orders indices (base 2005=100) - September 2011

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	Sep 11	Sep 11 Aug 11	Jul-Sep 11 Apr-Jun 11	Set 11	Sep 11 Sep 10	Jan-Sep 11 Jan-Sep 10	Sep 11	Sep 11 Sep 10	Jan-Sep 11 Jan-Sep 10
Turnover index	109.5	-5.4	+0.9	118.1	+1.9	+8.1	120.5	+1.9	+7.6
