

Industrial turnover and new orders

October 2011

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2009 the indices are calculated with reference to the base year 2005 using the new Ateco 2007 classification (Italian edition of Nace Rev. 2).

In October 2011 the seasonally adjusted turnover index increased by 0.1% with respect to the previous month (+0.1% in domestic market and -0.1% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +0.5 (-0.2 in domestic market and +1.9 in non-domestic one).

In October 2011 the seasonally adjusted industrial new orders index decreased by 1.6% with respect to September 2011 (-1.0% in domestic market and -2.4% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -2.3 (-0.7 in domestic market and -4.7 in non-domestic one).

With respect to the same month of the previous year the calendar adjusted industrial turnover index rose by 1.1 (calendar working days being 21, as in October 2010).

In October 2011 the unadjusted industrial new orders index decreased by 4.8 per cent with respect to the same month of the previous year.

Industrial turnover and new orders indices (base 2005=100) - October 2011

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	Oct 11	Oct 11 Sep 11	Ago-Oct 11 May-Jul 11	Oct 11	Oct 11 Oct 10	Jan - Oct 11 Jan - Oct 10	Oct 11	Oct 11 Oct 10	Jan - Oct 11 Jan - Oct 10
Turnover index	109.1	+0.1	+0.5	114.6	+1.1	+7.3	110.8	+1.1	+6.9
