

Retail trade

January 2014

The retail trade index measures the monthly evolution of the turnover at current prices of enterprises with retail sale outlets. With effect from January 2013 the indices will be calculated with reference to the base year 2010 using the Ateco 2007 classification (Italian edition of Nace Rev. 2).

In January 2014 the seasonally adjusted retail trade index was unvaried with respect to December 2013 (0.0% for food goods and -0.1% for non food goods). The average of the last three months compared to the previous three months decreased by 0.4%.

The unadjusted index decreased by 0.9% with respect to January 2013.
