

Industrial turnover and new orders

October 2015

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2013 the indices are calculated with reference to the base year 2010 using the Ateco 2007 classification (Italian edition of Nace Rev. 2).

In October 2015 the seasonally adjusted turnover index increased by 2.0% compared to the previous month (+1.4% in domestic market and +3.1% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -1.6% (-2.0% in domestic market and -0.9% in non-domestic market).

In October 2015 the seasonally adjusted industrial new orders index increased by 4.6% compared with September 2015 (+3.6% in domestic market and +6.0% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was -4.9% (-6.3% in domestic market and -3.1% in non-domestic market).

With respect to the same month of the previous year the calendar adjusted industrial turnover index increased by 1.6% (calendar working days being 22 versus 23 days in October 2014).

In October 2015 the unadjusted industrial new orders index increased by 2.2% with respect to the same month of the previous year.

In October 2015 the seasonally adjusted volume turnover index (only for the manufacture sector) increased by 2.1% compared with September 2015.
