

Industrial turnover and new orders

August 2016

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2013 the indices are calculated with reference to the base year 2010 using the Ateco 2007 classification (Italian edition of Nace Rev. 2).

In August 2016 the seasonally adjusted turnover index increased by +4.1% compared to the previous month (+4.1% in domestic market and 4.3% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +1.9% (+2.2% in domestic market and +1.2% in non-domestic market).

In August 2016 the seasonally adjusted industrial new orders index increased by +10.2% compared with July 2016 (+12.3% in domestic market and +7.1% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +8.3% (+5.0% in domestic market and +12.9% in non-domestic market).

With respect to the same month of the previous year the calendar adjusted industrial turnover index increased by +6.8% (calendar working days being 22 versus 21 days in August 2015).

In August 2016 the unadjusted industrial new orders index increased by +15.9% with respect to the same month of the previous year.

In August 2016 the seasonally adjusted volume turnover index (only for the manufacture sector) increased by +3.8% compared with July 2016.

INDUSTRIAL TURNOVER AND NEW ORDERS INDICES (BASE 2010=100). August 2016

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	August 16	August 16 July 16	Jun-Aug 16 Mar-May 16	August 16	August 16 August 15	Jan-Aug 16 Jan-Aug 15	August 16	August 16 August 15	Jan-Aug 16 Jan-Aug 15
