

Industrial turnover and new orders

March 2017

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2013 the indices are calculated with reference to the base year 2010 using the Ateco 2007 classification (Italian edition of Nace Rev. 2).

In March 2017 the seasonally adjusted turnover index increased by 0.5% compared to the previous month (+1.1% in domestic market and -0.9% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +0.4% (+1.0% in domestic market and -0.8% in non-domestic market).

In March 2017 the seasonally adjusted industrial new orders index decreased by 4.2% compared with February 2017 (-0.8% in domestic market and -8.3% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +1.5% (-1.7% in domestic market and +6.1% in non-domestic market).

With respect to the same month of the previous year the calendar adjusted industrial turnover index increased by +7.2% (calendar working days in March 2017 being 23 versus 22 days in March 2016).

In March 2017 the unadjusted industrial new orders index increased by 9.2% with respect to the same month of the previous year.

In March 2017 the seasonally adjusted volume turnover index (only for the manufacture sector) increased by +0.1% compared with February 2017.

INDUSTRIAL TURNOVER AND NEW ORDERS INDICES (BASE 2010=100). March 2017

	Seasonally adjusted			Calendar adjusted (a)			Unadjusted		
	Index	Percentage changes		Index	Percentage changes		Index	Percentage changes	
	Mar 17	Mar 17 Feb 17	Jan-Mar 17 Oct-Dec 16	Mar 17	Mar 17 Mar 16	Jan-Mar 17 Jan-Mar 16	Mar 17	Mar 17 Mar 16	Jan-Mar 17 Jan-Mar 16
