

## Industrial turnover and new orders

October 2017

The industrial turnover index measures the monthly evolution of sales by industrial enterprises at current prices. The new orders index is an indicator of the value of future deliveries of products (and services directly linked to these products) to be provided by industrial producers. Since January 2013 the indices are calculated with reference to the base year 2010 using the Ateco 2007 classification (Italian edition of Nace Rev. 2).

In October 2017 the seasonally adjusted turnover index increased by 1.1% compared to the previous month (+0.2% in domestic market and +2.7% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +1.2% (+0.6% in domestic market and +2.3% in non-domestic market).

In October 2017 the seasonally adjusted industrial new orders index increased by 1.9% compared with September 2016 (+1.9% in domestic market and +1.8% in non-domestic market). The percentage change of the average of the last three months compared to the previous three months was +2.4% (+3.0% in domestic market and +1.7% in non-domestic market).

With respect to the same month of the previous year the calendar adjusted industrial turnover index increased by 6.0% (calendar working days being 22 versus 21 in October 2016).

In October 2017 the unadjusted industrial new orders index increased by 12.5% with respect to the same month of the previous year.

In October 2017 the seasonally adjusted volume turnover index (only for the manufacturing sector) increased by 0.9% compared with September 2017.
